Sulfuric acid, Paper chromatography, Carbohydrates,

Resin extracted spruce wood flour was subjected to pre-  
hydrolysis with 0.5N HCl for different times of pre-  
hydrolysis indicated four different stages in the action  
of acid. Material losses were used as a basis for cal-  
culation of lignin in the original wood. These data were  
compared with the methoxyl numbers of the sulphuric  
acid lignin. A plotting of curves for both values against
